Are illegal movie downloads worth all the trouble? It is often tempting to get the latest blockbusters for free and watch it at your convenience rather than wait in long queues outside movie places only to be disappointed. However, be warned that these movies come with quite a string of disastrous consequences.

Moreover, although you will incur costs for legal movie downloads, they are minimal as compared to the price you'll pay for DVD's or store rentals at your local Blockbuster store. Not only that, but the fact is that if you use file sharing sites to download your illegal movies, you infringe on the copyright laws of the owners of the productions.

These file sharing types of sites usually contain a much lesser sound and picture quality in the files, not to mention the fact that they can also contain viruses that could harm your computer. In addition, the legal proceedings you could face from the registered owners of the movies themselves could be devastating.

These sites are often scrupulous and you cannot be assured of any kind of quality from the video that you may be downloading.

This type allows for those that will be regular users to download an unlimited number of movies for a set monthly price. This will allow them to get the maximum number of downloads at the lowest price possible per selection. The other is where you can pay for each individual movie that you download. You'll pay a little more per movie, so this method is best suited for the occasional users.

It is heartening to note that offenders are brought to justice every now and then and not everyone gets away scot free with the crime. Thanks to technology, you can now identify the exact person who downloaded the movie by tracking his Internet Service Provider (ISP) and using their help to find out the computer's location.

However, the agencies that track these offenders will not catch just about anyone due to the complication of the entire process. Often times, they will track a person who is downloading thousands of movies and reselling them in the market, trying to make an example out of them and hopefully preventing people from doing the same thing at their homes.

Many movie studios are now improvising some sort of security in the discs so that the people who download them cannot play it back on their system. This security is not foolproof and many hackers always find a loophole with enough time. With newer technologies, it is not that hard to break security protocols either.

It is like what happened with the music industry, where people suddenly were exposed to a world of sharing and free downloading between individuals.

The popularity of the illegal movie downloads will continue with time, and many people will succumb to it, rather than paying and procuring a legal version of the movie. As the movie studios continue devising new techniques to curb piracy, the pirates will also devise new methods to overcome these blocks and ensure that they continue doing what they are doing now.

A lot of the legal movie download sites now a days offer free trials. They allow you a certain number of downloads, or a time frame in which to try their services before any payment will be required.
